

CASE STUDY

RMR Group save 20 hours per week by utilising Gojee for Jobs, Inventory & Timesheets

How a mid-sized custom fabrication company automated job costing, inventory, and timesheets to scale without increasing headcount.

Gojee has given us back hours each week to focus on what really matters—growing the business."

- Keith Akers, RMR Engineering

The Client

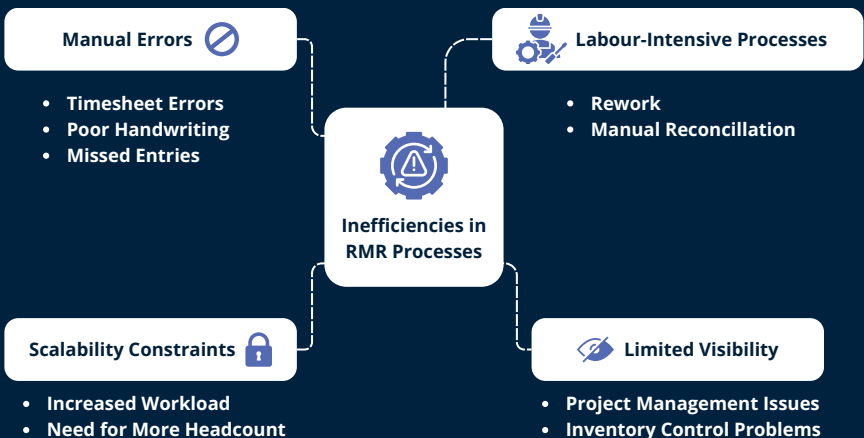

RMR Engineering, a specialist in stainless steel fabrication, has served the food and beverage industry for over 25 years. With five operating entities across Australia, RMR has been committed to delivering high-quality, custom fabrications.

However, as the business scaled, the team found it increasingly difficult to manage job costing, inventory, and timesheet tracking using manual processes. To address these challenges, RMR sought a digital transformation solution that would improve operational efficiency and scale with their growing business.

Challenges:

"When I first joined, RMR was a paper-based business. Job costing was handled in Excel, and timesheets were handwritten. The manual data entry and rework were overwhelming, making it impossible to scale effectively."

RMR's reliance on Microsoft Office and Excel for job costing and handwritten timesheets led to significant inefficiencies:

- **Manual errors:** Timesheet errors, poor handwriting, and missed entries were common.
- **Labour-intensive processes:** Administrative tasks were doubled due to rework and manual reconciliation.
- **Limited visibility:** Without real-time tracking, project management and inventory control suffered.
- **Scalability constraints:** Although RMR's workload was increasing, their processes couldn't scale without adding substantial headcount.

The Search for a Solution:

**Comprehensive
Features**

**Targeted
Features**

**High
Complexity**

User-Friendly

High Cost

**Affordable
Prices**

VS

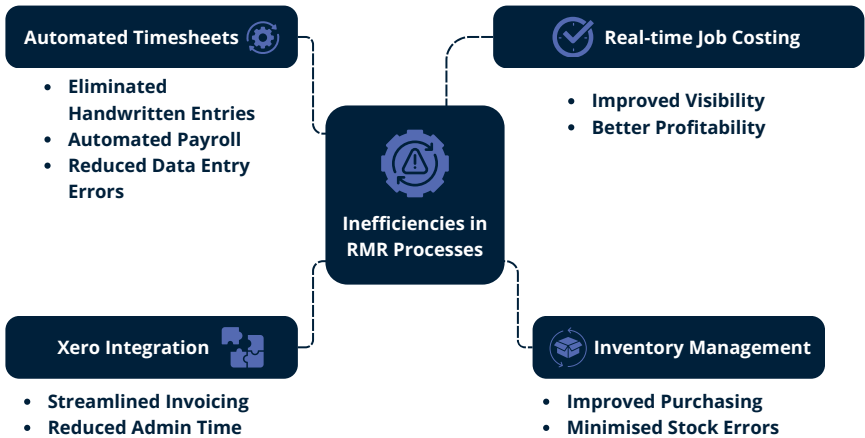

ERP SYSTEM

gojee

RMR initially considered a full ERP system, but the cost and complexity were not viable for a mid-sized business. Instead, they sought a solution that offered automation, real-time visibility, and integration with their existing systems, particularly Xero for payroll and financials. This search led them to Gojee, which offered the ideal mix of features without the heavy resource demands of an ERP system.

Gojee's Solution:

"We didn't have the budget or need for a full ERP system, but we needed something that would automate our key processes, especially in job costing, inventory, and timesheeting. Gojee offered the perfect balance of automation and affordability."

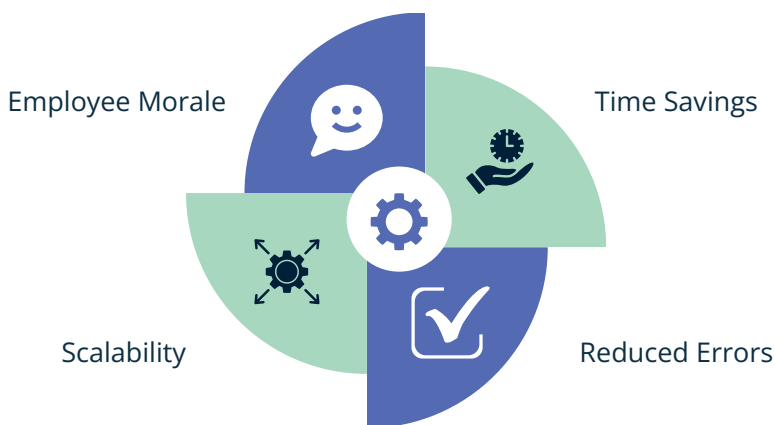

Gojee provided RMR with a flexible, automated platform that transformed their workflows. Key features included:

- **Real-time job costing:** RMR gained better visibility into the costs of jobs across all five entities, allowing them to manage profitability more effectively.
- **Automated timesheets:** Gojee's electronic timesheet system eliminated the need for handwritten entries, automating payroll and reducing data entry errors.
- **Inventory management:** Gojee's real-time inventory tracking improved purchasing and goods receipt processes, minimising stock errors.
- **Xero integration:** Seamless integration with Xero streamlined invoicing and financial reconciliation, reducing admin time.

The Result

“Gojee is helping us grow without the need to hire more administrative staff. Even as our workload increases, we’re confident that the system can handle it.”

Operational Improvements at RMR

Since implementing Gojee, RMR has experienced significant operational improvements:

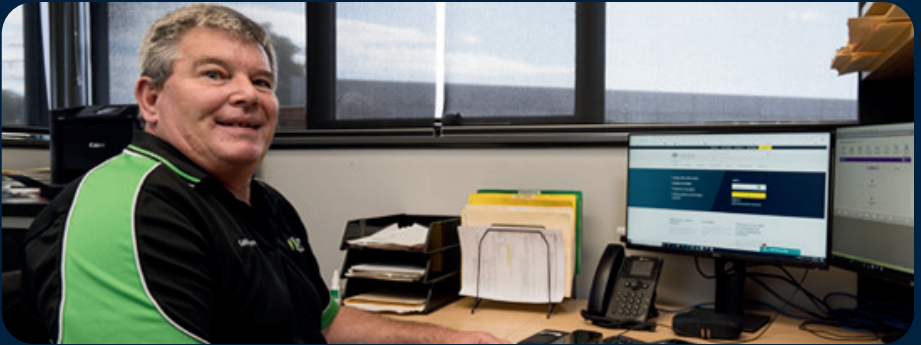

- **Time savings:** The automation of timesheets alone saved 30-45 minutes per day in processing time. As the system is fully rolled out, RMR expects to save up to 2.5 hours per day for junior admin staff, ultimately reaching 4 hours per day across all tasks.
- **Reduced errors:** With automated job costing, inventory, and timesheet systems, RMR has minimised the manual errors that once plagued their operations.
- **Scalability:** The system has allowed RMR to manage increased workloads without needing to significantly increase headcount.
- **Employee morale:** Automating tedious tasks has boosted team morale, allowing employees to focus on strategic responsibilities.

Quote from Keith Akers, RMR Engineering:

"When I came on deck, they were pretty much a paper business. Job costing was done through Excel, and timesheets were handwritten.

Gojee has given us back hours each week and allowed us to focus on what really matters—growing the business. We're excited about where this will take us."

Looking ahead:

As RMR continues to scale, they expect that Gojee will enable them to grow without the need for additional administrative staff. The company's leadership anticipates that real-time tracking of costs, inventory, and payroll will free up significant resources, allowing the team to focus on expanding the business further.

Advice to Other Businesses

Keith Akers offers key insights for other companies facing similar challenges:

"If your business is heavily reliant on manual processes, it's time to look for a solution that offers real-time visibility and automation. Gojee helped us streamline our operations without the high costs of a full ERP system, and the impact on our efficiency has been immense."

He also emphasises the importance of focusing on solutions that integrate seamlessly with existing tools, like Xero, to avoid disruptive overhauls.

"You don't need to be a huge company to benefit from automation. Even if you're in the \$10-\$20 million range like us, you can see massive returns by automating job costing, inventory, and timesheets. Gojee gives us the flexibility to grow without adding more admin staff, which is crucial for scaling efficiently."

Keith's advice to businesses is to consider the long-term scalability of their systems. By investing in an intuitive, mid-tier platform like Gojee, companies can free up their teams to focus on higher-value tasks, ensuring smooth growth without the need for significant increases in overhead.
